

Capabilities & Pilot Architecture 2026/27

Social Innovation | Applied Research | Community Pilot Design

Visio Nova Mundi CIC is an early-stage social enterprise developing evidence-led public-benefit concepts and testing them through staged discovery, pilot design, measurement and improvement. We work with communities and partners to understand needs, test bounded ideas and make the evidence for next steps clearer.

A PRACTICAL LEARNING CYCLE

UNITY HOUSE - A FUNDED VALIDATION EXAMPLE

A grant agreement dated 28 August 2026 records a £2,000 award to Visio Nova Mundi CIC from the London Borough of Waltham Forest's Community Health Champions Microgrant Fund for the Romanian Healthy Living and Community Kitchen Pilot.

The funded programme is six Romanian-English community health and wellbeing sessions for adults in South Waltham Forest, within the September 2026-March 2027 grant period. Individual session dates and the venue remain subject to confirmation.

These sessions are a controlled real-world validation phase for the broader Unity House model. They are not a permanent community centre, public waste-collection service or fully operating circular-economy hub.

KEEPING RESOURCE STREAMS DISTINCT

SAFE EDIBLE SURPLUS	Safe edible surplus may support affordable meals only where it is suitable for human consumption, lawfully sourced and handled under applicable food-safety requirements.
REUSABLE MATERIALS	Suitable reusable materials may be routed to reuse, repair or upcycling where practical.
UNAVOIDABLE FOOD WASTE	Unavoidable food waste must follow an appropriate waste-treatment route; composting is one possible route where suitable and lawful.

Any future operational activity must meet applicable food-safety and waste requirements, including any environmental permit or exemption that applies. Responsibilities and competent partners must be agreed before delivery.

ILLUSTRATIVE WAYS TO WORK WITH PARTNERS

Discovery & Pre-Feasibility	Possible activities: local need and stakeholder mapping; venue and partner discovery; operational-boundary identification; pilot scoping and evidence-framework design. A possible output is a discovery report identifying opportunities, constraints and Go / No-Go questions.
Pilot Design & Evaluation	Possible activities: pilot architecture; participant-journey mapping; process and volunteer tracking; outcome-measurement design; reporting structures and lessons-learned frameworks. A possible output is a structured pilot and evaluation framework.
Community System Design	Possible activities: community-integration design; circular-economy workflow concepts; surplus and reuse routing; volunteering and skills pathways; governance or escalation mapping. A possible output is a community-system concept for partner review.

Partnership, governance and next steps

THE WIDER UNITY HOUSE AMBITION

The longer-term ambition is a replicable neighbourhood community house and circular-economy hub. It could connect suitable local resources with affordable meals prepared from safe edible surplus; reuse, repair and upcycling; appropriate treatment routes for unavoidable food waste; and opportunities for local skills, employment, volunteering and community connection.

This wider model remains under development. The current six-session grant-funded pilot is a learning step toward it, not the whole model. Any future hub, resource intake or waste operation would require its own agreed scope, partners, responsibilities and permissions.

WORKING WITH PARTNERS

We welcome exploratory conversations with local authorities, host venues, universities and evaluators, community organisations, resource, surplus and reuse partners, and funders. These are prospective discussions, not a list of confirmed partners.

Engagements are considered individually. Responsibilities, outputs, funding, timing, safeguarding, privacy, insurance, permissions and reporting arrangements would be agreed in writing before work begins. The profiles on page one are illustrative, not guaranteed or fixed-duration services.

Visio Nova Mundi CIC is not presenting this brief as food-safety consultancy, accredited training or a licensed waste-treatment service.

GOVERNANCE AND PUBLIC BENEFIT

Visio Nova Mundi CIC is a Community Interest Company operating for public benefit. Its CIC asset lock restricts the use and transfer of company assets in accordance with the Community Interest Company framework, supporting their use for community benefit.

The wider portfolio also includes founder-led concepts. Their project-specific operators, ownership, intellectual property and responsibilities are distinct matters and should not be inferred from their appearance alongside CIC work.
